- II. Partial of the Moon March 22, invisible in U. S.
- III. Total of the Sun Aug. 31. More or less visible in its partial phases throughout N. America. The total phase will be visible in N. H., Vt. and Me. in the afternoon: at Portland about 3 p. m.
- IV. Partial of the Moon September 14, invisible.

THE PLANETS

Mercury may be seen Jan. 1—10, Sept. 3—10, and Dec. 15—20, rising about 1h. 15m. before the Sun: Also Mar. 10—21, and Nov. 10—20, setting about the same time after the Sun and he will be invisible at all other times.

Venus will be the Mid-Summer stellar attraction in the evening sky, increasing in brilliancy from Jan. 1 until May 22 and then decreasing to invisibility the last of June. She will then reappear in a few days in the eastern morning sky where she will rapidly gain in brightness until Aug. 5, after which she will fade to the end of the year.

Mars will be invisible the first of the year, but will pass the Sun Feb. 1 and then rise in the morning until the last of Nov. when on the Meridian at 6 A. M. Then in Dec. he will begin to rise in the evening. He will not be at his brightest within the year, but may be best seen at its close.

Jupiter will be brightest and an all-night-star in Jan.—Feb. rising at Sunset Feb. 7 and later setting in the morning until May 4 and then in the evening until Aug. 6 when he will set with the Sun and therefore invisible for many days before and after that date.
